

ZERO KILOMETER PURE WATER

When we talk about sustainability and environment, water becomes a primary subject for which we have no choice but finding sustainable and appropriate actions.

That is why we have decided to install equipment allowing us to enjoy micro filtered still and sparkling pure water directly from our property.

This initiative is powered by our will to decrease CO2 emissions related to the chain of production and delivery of traditional mineral waters. By doing so, we can propose water that is collected locally and optimized on point of use which preserves all the benefits of mineral salts present into our regional water.
